

Electrical heated gloves of the Luftwaffe

Description

Heated Gauntlets:

Luft Verordnung 40B (LV 40 B) No:148 of 16 February 1940 introduced heated electrical gloves "for a part" of the flying personnel.

The gloves are made of blue-grey suede leather (different shades) with a soft (non-stiffened) cuff.

Heated filament are inserted between leather and lining.

The flexible electrical cables are contacted in a similar manner as the heated protective suits and flying boots. The cuffs are lined with natural colored smooth leather, the cuffs have stamps inside.

Prepared by Jos Le Conté – July 2005

Remarks

Copies of these gloves exist, lining is wrong, stamps are not complete and they show some other small differences compared to originals
